

Play Mode Changes Saver Demo Tutorial

Version 1.0

Last Updated: February 2026

Demo Tutorial Steps:

1. Open Scene01:
Assets/PlayModeChangesSaver/DemoFiles/Demo_Scenes/Scene01.unity
2. Press Play to enter Play Mode.
3. Select the Cube GameObject and move it to a new position.
4. In the Inspector, click the "Play Mode Overrides" button and then click "Apply All".
5. Pick a material from:
Assets/PlayModeChangesSaver/DemoFiles/Demo_Materials
Assign it to the Sphere GameObject.
6. In the Inspector for the Sphere, click "Play Mode Overrides" and then "Apply All".
7. Select the "TestScript" GameObject and change the "Public Int" value to 5.
8. In the Inspector, click "Play Mode Overrides" and select the TestScript component in the dropdown. This opens the Comparison View.
9. In the Comparison View, change a few more values and click "Apply".
10. Switch to Game view (if you were in Scene view). There is a Canvas button in the bottom left corner. Click it to switch to Scene02.
11. In Scene02, repeat steps 3-6 with the Cube and Capsule GameObjects.
12. Now, with either the Cube or Capsule you already applied a new position:
 - Move it to another position again.
 - Open "Play Mode Overrides" in the Inspector.
 - Click the Transform component and choose "Revert to Saved". The GameObject should snap back to the previously applied position.
 - Move it again, then click "Revert to Original". The GameObject should return to its original position from before Play Mode started.
13. Exit Play Mode. Unity returns you to Scene01.
14. After exiting Play Mode, the "Apply Overrides" dialog appears for Scene01.
Choose one:
 - Apply to save your modifications
 - Discard to lose your changes
15. The "Scene Switch" dialog appears. Confirm switching to the next modified scene (Scene02) by clicking Yes.
16. Repeat step 14 for Scene02.
17. The "Return to start scene?" dialog appears. Choose:
 - Yes to return to the initial scene (Scene01.unity)
 - No to stay in the current scene

That's it. Your changes are now saved to the scenes. Open Scene01 and Scene02 to verify the applied changes. You can also use the Overrides Browser (Tools -> Play Mode Overrides Browser) to see an overview of applied changes in the current scene, and open a component to review or revert it if needed.
